

Every answer your attorneys need is already in your case files.

Legal and compliance teams are among the most knowledge-intensive in any organization. Drafting, research synthesis, deadline tracking, client updates: the same patterns, matter after matter. Pensato embeds your firm's institutional knowledge directly into those workflows, so billable minds focus on judgment, not assembly.

BEYOND THE BASICS

Embedded AI removes friction across the practice.

Drafting, client communications, research summaries — those are the starting point. The deeper opportunity is in everything that happens between the work and the outcome. Use cases include:

- Contract Review & Clause Flagging
- Demand Letters & Pleading Drafts
- Deposition & Transcript Summaries
- Lien & Title Summaries
- Regulatory Change Impact Analysis
- Audit Response & Regulatory Inquiry Preparation
- Matter Status Reports & Client Metrics

THE PENSATO DIFFERENCE

Intelligence embedded in the matter.

We create a secure intelligence layer that embeds your case knowledge, precedents, and firm standards directly into AI workloads — making them usable without moving data or exposing privileged information.

Instead of asking attorneys and paralegals to prompt machines, we make intelligence native to the workflow itself. The result is AI that is reliable, compliant, and invisible — not a research tool you return to, but a foundation your practice runs on.

WHAT YOUR TEAM GAINS

CAPABILITY Embedded Intelligence

Organizational context is embedded directly into document workflows.

CAPABILITY Deterministic Outputs

Same document, same query, same answer. Output tied to source data, traceable in any audit.

CAPABILITY No Prompting

DMS surfaces intelligence native to the workflow, not dependent on user skill.

CAPABILITY Full Audit Trail

Compliance leads can cite DMS outputs directly in regulatory reviews, no additional work required.

The highest-cost work in a legal practice isn't argument or strategy — it's the repeated reconstruction of information that already exists in the matter. That work doesn't disappear when you add AI tools. It disappears when intelligence is embedded in the workflow.

Built for Practices Where Every Output Is on the Record

Legal and compliance teams work in environments where outputs become part of the matter record. Attorney-client privilege, bar compliance obligations, regulatory inquiry responses, and audit submissions all require answers that are consistent, traceable, and produced without exposing privileged information. Pensato embeds your firm's knowledge directly into AI workloads without moving or exposing it. When a regulator, auditor, or opposing counsel asks where an answer came from, your team can show exactly how it was produced.
